

Wall Viewing Systems

Optimized Systems for Accurate Large Format Color Viewing

GLE-1032PH luminaires

Quality output needs to be viewed in controlled conditions to ensure accurate color matches and fidelity, and to maintain brand integrity. GTI has the expertise and product portfolio to configure an ISO 3664:2009 D50 compliant large format vertical viewing area to fit your unique viewing requirements and environment.

To deliver proper light intensity and uniformity over a large vertical viewing surface, an optimized system of overhead luminaires, D50 5000K lamps, and accessories (wall panels, neutral gray paint, and mounting brackets) is required.

GLL-1032e/PH luminaires

GTI Wall Systems Feature:

- An innovative system design
- Easy-to-install wall brackets precisely position luminaires for superior viewing
- Graphiclite® D50 5000K lamps
- Available wireless remote
- LiteGuard II system monitoring to assure proper maintenance of GLE series luminaires is available
- Custom Munsell N8/ neutral gray metal wall panels

Graphiclite Luminaires

Luminaires are the key component of a wall viewing system. GTI's Graphiclite luminaires feature an innovative lens and geometry design that provides superb light uniformity over a large vertical area. All GTI luminaires utilize Graphiclite Color Viewing Lamps and are engineered to provide precisely balanced D50 output.

Luminaires are available in two styles. The GLE series has a thin profile which is ideal for conference rooms and design studios. The GLL series is designed for color viewing in production areas. Luminaires are configured with single-source D50 lighting as a standard. Fixtures can be ordered in four or five foot lengths. Both are available with LED or fluorescent lamps. A wireless remote control is available for all fixtures. For soft proofing applications, a digital dimming feature is available for systems with four foot luminaires using fluorescent lamps.

Graphiclite Color Viewing Lamps

GTI's Graphiclite lamps provide the highest degree of accuracy and provide a superior D50 spectrum. Proper color rendition is accomplished by tightly matching industry D50 standards. Graphiclite lamps deliver a much tighter compliance to industry viewing standards than other 5000K lamps.

Wall Viewing Systems for Large Vertical Areas

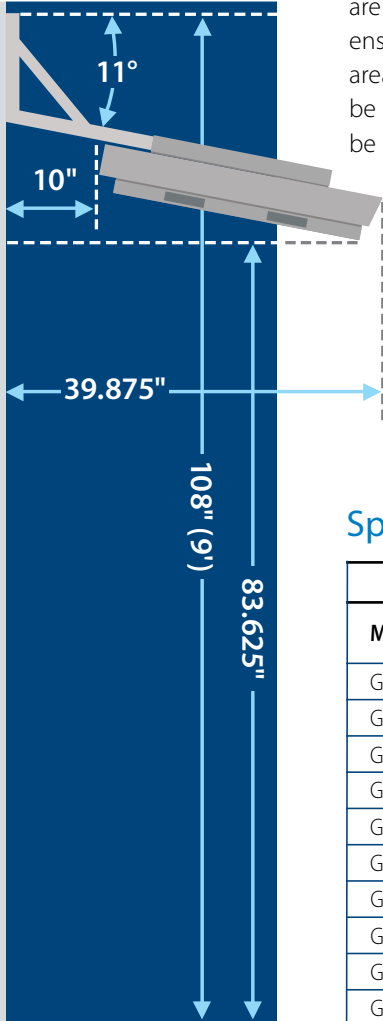

Superior Lighting Where Color is a Critical Aspect of Your Business

Mounting Options

Proper viewing conditions require that luminaires be mounted correctly. GTI's wall mounting brackets are designed to optimize your viewing area and to ensure a secure installation. For extra large viewing areas or maximum uniformity, several luminaires can be mounted side by side, and a lower luminaire can be mounted on a rolling floor stand.

Wall Panels

GTI's custom Munsell N8/neutral gray panels are mounted to the wall. Panels up to four foot by eight foot are available. For larger areas, multiple panels can be placed edge to edge. Panels feature a steel viewing surface to allow the use of magnets (included) to hold artwork. Munsell N8/ neutral gray paint is available for background walls.

GTI's GLE (left) and GLL (right) series luminaires, shown with wall brackets, are available in 4 and 5 foot models. GLE luminaires have a front power switch and a power cord which plugs into a standard outlet. GLL luminaires must be hard wired into a switched power circuit.

Specifications/Model Numbers

Luminaires			Options			
Model Number	Length	Lamp Technology	Wall Bracket	Soft Proofing*	LiteGuard II*	Wireless Remote*
GLL-548/LED/V	4'	LED	WB-GL/48	No	No	Yes
